Fajis PM.

Full-stack & Mobile Developer — PHP, React Native, MySQL

Bahrain · Remote-friendly fajis.is-a.dev github.com/fajis

PROFILE

Full-stack and mobile developer. I plan, build and launch apps — and the servers behind them. I work on every part of an app: the server (PHP), the database (MySQL) and the mobile app (React Native), and I keep the code simple so it is easy to change later.

EXPERIENCE

Developer

2023 – Present

Harvard Soft Tech

Systems built:

- **Property management system** — a platform to manage rental units, tenant leases and automated rent collection
- **Car rental system** — a fleet management tool for tracking vehicle availability, bookings and customer rentals
- **Inventory management system** — a stock control engine for monitoring warehouse levels and tracking products
- **Gym membership management system** — a platform that helps gym owners run their daily business, manage members and handle payments
- **Digital loyalty & rewards platform with e-commerce** — a digital loyalty card system for e-commerce stores, integrated with Fatoora for invoicing and billing
- **School management system** — an enterprise education platform for managing student records, attendance and academic administration
- And many more

SKILLS

Backend	PHP — REST APIs and server logic
Mobile	React Native — Android and iOS apps, published on Google Play
Database	MySQL — table design and query performance
Frontend	JavaScript ES6+, HTML, CSS
Learning	TypeScript, Redux, DevOps

OWN APPS

Google Play	**Stay Fit** — track workouts, steps and meals
Google Play	**Oneline** — short notes you can search and look back on
Google Play	**Calculator+** — calculator with currency converter and history

LANGUAGES

English, Hindi, Malayalam
