Fajis PM.

Full-stack & Mobile Developer — PHP, React Native, MySQL

Bahrain · Remote-friendly fajis.is-a.dev github.com/fajis

PROFILE

Full-stack and mobile developer. I plan, build and launch apps — and the servers behind them. I work on every part of an app: the server (PHP), the database (MySQL) and the mobile app (React Native), and I keep the code simple so it is easy to change later.

EXPERIENCE

Backend Developer

May 2023 – Present

Harvard Soft Tech · Bahrain

Systems built:

- **Property management system** — a platform to manage rental units, tenant leases and automated rent collection
- **Car rental system** — a fleet management tool for tracking vehicle availability, bookings and customer rentals
- **Inventory management system** — a stock control engine for monitoring warehouse levels and tracking products
- **Gym membership management system** — a platform that helps gym owners run their daily business, manage members and handle payments
- **Digital loyalty & rewards platform with e-commerce** — a digital loyalty card system for e-commerce stores, integrated with inventory management
- **School management system** — an enterprise education platform for managing student records, attendance and academic administration
- And many more

Before development

2019 – 2023 **Sales Officer – Loans**, Bajaj Finserv Health (Aster MIMS Hospital)
